If you are looking at Spiceworks you will read this a lot: Server 2016 is very slow in updating. A client runs a range of Windows servers, from Windows Server 2008 R2, passing through Windows Server 2012 / R2, to Windows Server 2016, where it is noted that Windows Server 2016 is extremely slow to install updates. If you are looking for the Internet, you will find many other entries in the People Forum who complain of a slow updating installation in Windows Server 2016. After it is no longer so bad. That, we are not talking about clients who can be removed from the network and updated. Thumb UP thumb down Hushing Bryan Eco in this. Do you affect the slow update processes in Windows Server 2016 or is it no longer a problem? In Reddit.com you will find this November 2017 thread, where a software developer writes the following: Why the Windows update application is so slow in Window Server 2016 compared to Windows 10 than Share the same none? I use server editions (2008 R2 and 2016) as "" work station "in virtual machines for software development. Also there is stated that older server editions install the updates quickly, while Windows Server 2016 wobbles miserably long time. Do not misunderstand me, it's still bad, but much better than the RTM version. The German Golem site proposes to use a manual update installation as a solution to set the updating installation. Inside the thread there are denials, and also explanations by what this takes so long (Size of accumulated updates). While the previous versions of Windows Server are performed with the updating installation after one hour, the machines with Windows Server 2016 sometimes play with updates during a day day the system is ready to run again. The first cumulative update<sup>3</sup> takes forever. A WhatA© version<sup>3</sup> Windows Server? Install the latest Windows CU manually (download and run). This thread on the Microsoft Technet forum in July 2017 describes the dilemma facing administrators: A customer has a collection<sup>3</sup> servers running 2008r2, 2012 and 2016 A Is it just me or are the 2016 server upgrades slow?! I had updated all 2008r2 and 2012 in about an hour, however, 2016 servers took the best part of a day to upgrade and install! What's wrong with that? 2012? OK tks #EMINENTX GerardBeekmans wrote: A possible answer here: Tracking level (accidentally) set too high. thumb up thumb down If the problem comes from Win 2016, why do I have the problem on 4 servers? 03/04/2018 - Yes windows server 2016 has a real issue with updates. half the time, it fails to install and tells you to try again later. Then once it is installing, it sometimes can't completed it and you need to try again later. To make things even worse, it takes forever to install updates. We can't have people waiting around for hours to install an update.

30/06/2020 - In this article, I am going to explain how we can install and configure the iSCSI Target Server Role on Windows Server 2016. iSCSI stands for Internet Small Computer System Interface and iSCSI Target Server allows you to boot multiple computers from a single operating system (OS) image.
