Create an anonymous link, a secure and encrypted link link here. Do you want links anonymously without websites other referriers to? Just put HTTPS: // BlankreFer /? Front of your connections. For example: https://blankrefer.com/? Https: //google.com The name may seem simple. Some may think of it as only another FastBoot ADB installation program. However, the function of this tool is well over. Done, it's a usefulness that has many tools within a single software. Enter the Xaf (Xiaomi ADB FastBoot Tools) tools! It is fundamentally a single Windows-based software with different tools that reside inside. The tools are called modules. Xaf has main functions of anything can make a traditional ADB fastboot tool. Except, all functions now have GUI (graphical user interface). This makes all the work easier for beginners users. Users (I, we, and you) are no longer necessary to store all commands just to run almost all activities related to their Xiaomi Android devices. Xaf helps users establish an ADB and FastBoot connection. Once established, users will be able to select which actions want to proceed. READ ALSO: USB XIAOMI ADB FastBoot Driver. Now let's talk about some of her key features. Uninstaller: This function allows users to remove integrated apps. Xiaomi phones are usually shipped with several predefined apps, including the store I mi, my computer, I scanned me, remote me, etc. This feature allows users to uninstall any default app. Those apps are not bloatware for some. Others may be useless and therefore it becomes bloatware for them. This function can also uninstall any apps and factory services. Camera2: The most refined feature. Many fans are demanding to unlock their phone bootloader just to enable camera API2. This function allows users to enable and disable the camera API2, enable and disable EIS (electronic image stabilization) and to restart in recovery. Once the Android API Camera2 has been enabled, users can install any camera app with manual controls, just like a DSLR. File Explorer: This is the most popular feature. This launches an Explorer file that allows users to manage your own files stored in the phone storage space. This function is very convenient because sometimes copy and paste files from and to the phone are crucial. Densit of the screen: users can now adjust and easily modify the DPI value of your phone screen. Higher is the DPI, the better the display. Lower is, lower it is the quality of the display but can save the battery power. Device properties: Once clicked, Xaf will retrieve many statistics and device information. Flasher: This is the definitive feature of Xaf. The software can flash almost everything that is able to flash via ADB-FastBoot connection. Users can flash custom recoveries, Fastboot ROM flash, etc. This function is also able to start any image. Wiper: Well, his name says everything. This function is required for those wishing to delete the cache or perform a factory reset. OEM Unlocker / Locker: this canse the phone bootloader in a condition; The phone runs Android One (MI A1 / MI A2). This does not work on MIUI devices. Miui Roma Downloader: This function is very useful. Instead of surfing around just to download the correct MIUI ROM, this function directly retrieves the link to the FastBoot Rom. Users can copy the link or download the ROM directly. RiaBooter: you restart the user users of users without effort without touching the power button.
