

Commensurate verb form

one form of it as an instance. Here the problem also exists but it is envisaged by oneself rather than propounded by another, and it may or may not have a known formulation, known method of solution, or known solution. For example, a four-year-old asks spontaneously, "Why does it get lighter outside when you put the light out inside?" (Henle, 1971). Or Roentgen sees a fogged photographic plate as others had before him and asks, "Why is the plate fogged?"—a self-initiated problem that led not only to the X-ray but to a revolution in atomic science. Here the problem was not presented to the individual by another—neither to the four-year-old nor to Roentgen; they discovered the problems themselves, and even took some pleasure in doing so. This is clearly a different order of problem situation from the presented problem situation.

Consider finally the *created problem situation*. Here the problem does not exist at all until someone invents or creates it. For example, N.R.F. Maier invents a series of puzzles or problems to test the problem-solving abilities of his subjects; the scientist conceives of the problem: What is the nature and speed of light; the artist creates a still-life problem where no such problem existed before. Surely it makes no sense to think of these situations as merely obstacles one meets through ill-fortune, ignorance, or ineptitude. Quite the contrary; these problems are situations that one strives to find and formulate. Indeed, a well-formulated problem is at once a result of knowledge, a stimulus to more knowledge, and is itself knowledge (Henle, 1971). As Polanyi (1958) put it:

What is a correct form. Commensurate past form of verb. Is commensurate a verb. What is the verb form of work. What is the noun form of satisfy. Second form of verb commensurate.
