## Clockworkmod recovery update zip

Hello to everyone ! ClockWorkMod Recovery v6.0.3.7 - English language !!! About : - based on CyanogenMod 10.1 ( android 4.2.2 ! ) - you can install custom rom, wipe cache , dalvik-cache , data/factory reset, backup & go on ... ! - mount external storage on USB is not work on this release ; - you can boot in recovery by pressing Volume-up or Volume-down after you'll see the led red blinked ! Change log : Renamed CWM-based Recovery to ClockworkMod Recovery ! setting properly fonts for 720p device ! Downloads : Installation : copy update.zip on your external sdcard ! go to CWM Recovery 6.0.3.6 or CWM Touch Recovery ; install zip -> choose zip from external sdcard ; go to update\_cwm6037.zip -> Yes , install "update\_cwm6037.zip" ! reboot system now -> choose No or +++ Go Back +++ !!! Known Bugs : can not mount /sdcard aka internal storage ! can not restore backup ! This recovery is not Touch recovery ! Get in this CWM Recovery by pressing a few times on Volume-Up or Volume-Down after the led red blinked !!! This CWM Recovery will not affect your device, because it will not rewrites the recovery partition !!! If your device not boot into CWM-based Recovery , or you do not see the red led blinked - please send me by PM ( instead pastebin ) this files : /cache/chargemon/chargemon.log & /cache/chargemon/chargemon.log.old ! Thanks ! -- since this is the test release - may contain bugs - I'll hope to solve on the next updates -- regards, Surdu Petru Last edited: Sep 29, 2013 Reactions: TeamSDX, Larsbrehrens, lunazap and 9 others ClockWorkMod Recovery v6.0.3.6 - English language !!! Downloads : CWM-based Recovery v6.0.3.6 -> update.zip md5\_e86b1c9b78661e31e17a5ac152635c4a Installation : you need already installed CWM Touch Recovery ! copy update.zip on your device ; go to CWM Touch Recovery ; go to install zip and choose "update.zip" ! reboot & enjoy !!! regards, Surdu Petru Last edited: Sep 29, 2013 Reactions: joosjhh Is backup (and restore) fully working? I want to try some of the newer roms but dont want to give up my b106. Sent from my HUAWEI P6-U06 using Tapatalk 4 How is it possible that I have two recoveries that i can enter in? first is this one pressing voi buttons then second is recovery touch from app Last edited: Sep 16, 2013 Is backup (and restore) fully working? I want to try some of the newer roms but dont want to give up my b106. Sent from my HUAWEI P6-U06 using Tapatalk 4 Hi! I tried to install a custom ROM and than I maked a backup successfully! I not tested yet restory ... I'm a little busy now . I'll back soon ... Also I'll make a tut for how you can uninstall this recovery! I've updated ramdisk with the touch recovery branch, I will add it here but use at your own risk. Feel free to add it against your thread if you wish surdu\_petru. Since this is using a similar method to our previous I don't see how any harm could come from it. Last edited: Sep 16, 2013 Reactions: Dr.Now and surdu\_petru I've updated ramdisk with the touch recovery branch, I will add it here but use at your own risk. Feel free to add it against your thread if you wish surdu\_petru. Since this is using a similar method to our previous I don't see how any harm could come from it. Best Regards, s89 Hi! Thanks, I'll update my OP soon ! Good luck ! Reactions: datafz Update details ! Sorry for my OP info " - first, this is my first custom recovery made by me !!! " ! wrong This recovery was my first custom recovery ! - but it is also true, because is the first recovery for this device ! I've updated ramdisk with the touch recovery branch, I will add it here but use at your own risk. Feel free to add it against your thread if you wish surdu\_petru. Since this is using a similar method to our previous I don't see how any harm could come from it. Whoops added wrong files, it's actually non-touch recovery... Correcting to Touch Recovery. When rebooting from CWM Touch Recovery Bootloader Version ensure you select no when prompted - No, Yes and Go back. If you select yes it wipes the scripts required for this method to run meaning you will need to redo the CWM installation again. However option "No" retains those required files even on reboot from CWM. @surdu\_petru - We need to collaborate our efforts with xda member kholk you can follow his progress to implement kexec support here for the Honor 2 which has near identical HW to us. I messaged kholk already and received a swift response via PM stating that work is still in the early stages and when further information and progress has been made he'd like to join efforts with myself in order to yield the same for the P6. In the meantime your nifty boot script allowing boot-time user intervention in order to access recovery has taken the frustrating part of developing for our device away. You might have noticed I have added your development with my amended Touch Recovery update to my existing thread here. I have credited you along with a link back here in order to rightfully state ownership of your findings and work. If there are any issues don't hesitate to PM me and I will happily take down any links of concern. Hello! Thank you very much ! If we can run kexec kernel on our device is equal with : we can run CyanogenMod on our device! Also he made kexec kernel on Motorola Droid RAZR locked boot loader...!!! I have this device expressed for development...so I'll do all for running on our device AOSP based ROMs! Good luck and have a nice day! :highfive: Reactions: fotoingo, dimsat1, HEXC and 3 others Page 2 Sorry for my question.... want to install it but i have the problem that i have no red led light an i dont find /cache/chargemon/chargemon.log & /cache/chargemon/chargemon.log.old to send you de log files..... i have /cache but de folder ist empty..... i am sure that iam doing something wrong please help. StierOle Sorry for my question.... want to install it but i have the problem that i have no red led light an i dont find /cache/chargemon/chargemon.log & /cache/chargemon/chargemon.log.old to send you de log files..... i have /cache but de folder ist empty..... i am sure that iam doing something wrong please help. StierOle Hi! Please, take a look here ! Reactions: StierOle this version is a big change, it can be launched without entering android system(which the former version can not), this is really important for a recovery: in case you can't enter system, you can use it to save your phone I know but I have some CWM recovery and u know what is main thing ? I NEVER used it ! this smartphone has just official ROMs updates.. And am using or almost everyone using built in update function .. there are no any custom ROMs no websites for this phone .. so it is quite useless.. this third party recovery.. I have other 4 smartphones and I have custom ROMs on each one of them EXCEPT Ascend P6 DOH .. Just released B118 gonna copy it into phone and just use system update.. Unless some proper custom ROM wont release like : Cyanogen MOD or Android HD Revolution , or Viper ROM etc ., this CWM is obsolete ! Yes, It's all a bit down until our beloved P6 shows up on this page Riques ClockWorkMod Recovery HP SLATE 7 Voice Tab..? Riques ClockWorkMod Recovery HP SLATE 7 Voice Tab..? or create CWM ? Home > LG Our visitors have been asking us to make a quick and simple guide on how to flash ".zip" files using ClockworkMod [CWM] Recovery. Warning: Warranty may be void of your device if you follow the procedures given on this page. You only are responsible for your device. We won't be liable if any damage occurs to your device and/or its components. So here it's (folks!): Instructions on How to Boot & Use CWM Recovery: Switch off your phone, and wait until it vibrates. Now boot into recovery mode, press & hold the following combination of keys together: "Volume UP + Home key + Power button" Use the "Volume UP & DOWN" keys to navigate/scroll through options in the recovery Use the "Power button" to select an option in the recovery Instructions on Flashing ".zip" files using CWM: Transfer the ".zip" you want to flash to your sdcard.The best way is to save the file in the root of SD Card. But you can also save the file in any folder you wish on your SD Card. Boot into recovery mode [See instructions above] Now Scroll to "install zip from sdcard" and select it. Select "choose zip from sdcard". Scroll to the file you transferred in Step 1 and select it. Now confirm installation by selecting "Yes — Install xxxxxxxxxxxxxxxx.zip" Once the installation is complete, go back and select "reboot system now" That's it. [info]Important! These are only general steps on how to flash files using CWM, but if the file you're flashing requires additional things to be done before/after flashing then please kindly do that too. For e.g "wipe data/factory reset", "wipe cache partition" etc.[info] The ClockworkMod Recovery was originally created by Kaushik Dutta, you can visit his blog here. clockworkmod recovery update zip download
